

Organic Chemistry

(IGCSE Chemistry Syllabus 2016-2018)

Number of carbon(s)	Root	Alkanes	Alkenes	Alcohols	Carboxylic acids
1	Meth-	Methane	Methene	Methanol	Methanoic acid
2	Eth-	Ethane	Ethene	Ethanol	Ethanoic acid
3	Prop-	Propane	Propene	Propanol	Propanoic acid
4	But-	Butane	Butene	Butanol	Butanoic acid
5	Pent-	Pentane	Pentene	Pentanol	Pentanoic acid
6	Hex-	Hexane	Hexene	Hexanol	Hexanoic acid

Fuels

- Petroleum is separated into fractions which are useful via **fractional distillation** (based on their boiling point)

Homologous Series

- Characteristics of a homologous series are as follows:
 - Same general formula
 - Consecutive members of the series differ by CH_2
 - Similar chemical properties
 - Same functional group
 - Gradual change in physical properties

Isomerism

- Molecule with the **same molecular formula** but **different structural formula**
- IUPAC naming:
 - Choose the longest chain
 - Determine the position of the side chain, using the smallest number
- Examples:

a. Draw and name the isomers of butane

Note: To draw the isomers of hydrocarbon, **straight chain hydrocarbon** can be converted into **branch chain hydrocarbon**

Butane (C₄H₁₀)
(a continuous chain alkane)

2-methyl propane (C₄H₁₀)
(a branched chain alkane)

b. Draw and name the isomers of propanol

Note: To draw the isomers of **alkene**, **alcohol**, and **halogenoalkane**, the **functional group** can be shifted from the **either end of carbon** to the **middle carbon**

1-Pentene

2-Pentene

1-Propanol

2-Propanol

2-chloropropane

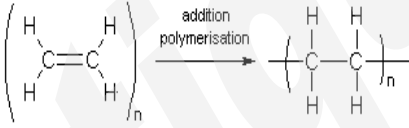

1-chloropropane

Alkanes and alkenes

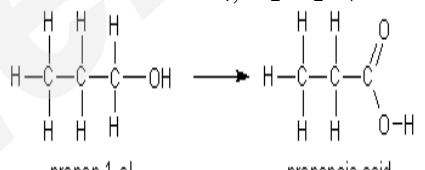

- Alkane and alkenes are hydrocarbon – molecule that contains carbon and hydrogen only

	Alkanes	Alkenes
General formula	C_nH_{2n+2} , $n=1, 2, 3\dots$	C_nH_{2n} , $n=2, 3, 4\dots$
